	Purvanchal or north-eastern mountain ranges. The mountains
	not only serve as a physical barrier, they also have an
	important role to play in the climate and lifestyle of this
	region.
	The Himalayas:-
_^	The Himalayas are the world's highest mountain ranges. They
	extend from Jammu and Kashmir in the north, to Arunachal
	Pradesh in the north-east, covering a distance of 2,500
	kilometers. The width of the Himalayan ranges varies from
57	150 to 400 kilometers. Many of the world's highest peaks are
	in the Himalayas. Mt. Everest, the highest mountain peak in
	the world lies in the Himalayas. It is 8,848 m high and is
	located in Nepal.
	IMPORTANCE OF THE NORTHERN MOUNTAINS The Himselesses forms a large small all along the morthern hander.
	• The Himalayas form a huge wall all along the northern border
	of India, protecting us from enemies.
	They prevent cold winds blowing in the north from entering India
	India.

 They stop rain-bearing monsoon winds from moving ou our country and cause heavy rainfall in India. The forests in the Himalayas provide us with wood, fue medicines, herbs, etc. They are also home to a variety or

Concept.	Democratic Republic of Congo - The Land of Dense Forests
What will I	The rich heritage of our country
learn?	The life of people in Torrid Zone
To Read &	DEMOCRATIC REPUBLIC OF THE CONGO - LAND OF
Understand:	DENSE FORESTS
	The region lying between the Tropic of Cancer and the Tropic
	of Capricorn is called the Equatorial region, Tropical region or
	the Torrid Zone. This region experiences a hot and wet climate
	throughout the year. The Democratic Republic of the Congo
	(DRC) lies in this region.

Location

The Democratic Republic of the Congo lies in Central Africa. Its capital city is Kinshasa. The Equator passes through the northern part of the country. One-third of the country lies in the Northern Hemisphere, while two-thirds of it lies in the Southern Hemisphere. It is the second largest country in Africa, after Algeria.

The second largest river in Africa, the Congo river, flows through the Democratic Republic of the Congo. The river is also called the Highway of Central Africa. The central and western part of the country is situated in the Congo River Basin.

Climate

The Democratic Republic of the Congo has a hot and wet climate as it lies close to the Equator. This region gets direct rays from the Sun all-round the year so temperatures remain high. In the Congo basin, rainfall occurs almost throughout the year. Mornings are usually pleasant with bright sunshine. By noon, the temperature rises and the humidity shoots up. This leads to the formation of clouds which causes heavy rain in the afternoon. Evenings and nights are cool and comfortable.

Vegetation and Wildlife

Democratic Republic of the Congo has a hot and humid climate and has abundant sunshine and rain. A large part of it is covered with dense forests. The forests have a large variety of trees. Most of the trees are tall. The forests which receive consistent rain and are ever growing are known as rainforests. The trees are evergreen as they are covered with leaves throughout the year.

The rainforests and grasslands are home to a large variety of wildlife. The grasslands have lions, giraffes, elephants, antelopes

	and a variety of snakes as inhabitants. Many rare species of
	gorillas, chimpanzees and baboons roam in the forests freely. The
	areas near the river are home to hippopotamuses and crocodiles.
	Not only this, the country is also home to a wide variety of birds
	and butterflies such as toucans, humming birds, macaws and
	parrots. Many animals and birds live on trees such as monkeys
	and flying squirrels.
