Concept:	Conquering Distances
What will I learn?	<ul style="list-style-type: none"> - Development of transportation - Importance of transportation - Means of Transport
To Read & Understand:	<ul style="list-style-type: none"> - You have already read that early humans travelled on foot. Do you think that covering long distances on foot would have been easy and comfortable? It was not only hard but also very difficult. So, as time passed, early humans began to look for easier and faster means of transport. They started to make use of animals like horses and donkeys. However, it was the invention of the wheel which marked a turning point in the history of early humans. They could now cover long distances with carts fixed on wheels. The second big step came with the invention of the steam engine. The steam engine developed by James Watt was used in trains and ships which made it possible to carry goods and people over long

distances. Later engines which could run on petrol and diesel were invented.

NEED FOR TRANSPORT

- Various types of industries are located in different parts of the world. Industries required raw materials to produce goods. These raw materials often needed to be brought in from far off places. And once the raw materials were converted into finished goods, they needed to be taken to the market. For all of this, efficient means of transport were needed. Nowadays, many Industries are connected to cities and ports by road or by rail. Whether it is transportation of goods or movement of people, to develop, a country requires a good network of transport systems and of transport have brought the world closer

MEANS OF TRANSPORT

- The means of transport can be divided into-land transport, water transport and air transport. Land transport includes-roadways and railways.
- Roadways
- Earlier Indian roads were kuchha but with advancement of technology, faster vehicles were developed. This led to the need for better roads. Hence, roads were needed for faster and smoother movement of vehicles. Today, there are broad roads that connect major cities. They are called national highways, freeways or expressways These roads allow traffic to move at high speeds.
- They often have one or more lanes to allow vehicles to travel quickly. Our country has many such roads. Just like roads connect different parts of a country, there are roads which connect one country with another. They are called international highways. Networks of such roads connect different countries of Europe with one another. Our country is also connected by road with her neighbours such as Pakistan, Nepal, Bhutan and Bangladesh
- Railways
- Railways are one of the most convenient means of carrying goods and people over long distances. Rail transport was initially developed with the invention of the Steam Engine and rails. Nowadays, trains run on diesel or electricity. In India, the railways were introduced by the British India's first train ran in 1853 between Mumbai and Thane. By now many superfast trains have been introduced in our country such as Rajdhani Express and Shatabdi Express Besides, a number of heritage trains such as Deccan Queen and the Palace on Wheels were Introduced for tourists. Presently, India has the second largest railway network in Asia and its railway network is the fourth largest in the world. USA has the

	largest railway network in the world. Railways connect most towns and cities of our country. We also have railway services which provide transport within cities such as Mumbai Suburban Rail. The development of railways has played a big role in the growth of industries in different parts of the world.
